Meter Reading Instructions

In 2016 all Eastsound Water meters were upgraded. These new meters are connected to an “endpoint” that reports water use on a daily basis. This data is available to Eastsound Water operators. The data from your meter is also available to you via our “EyeOnWater” interface.

These instructions are specifically for how to read your water meter in the meterbox. Each meter has an LCD display. This display “flashes” between 4 different screen, which are shown below.

- **SCREEN #1**
  - Meter Size (25 = ¾” meter)
  - # of digits to be displayed (9)
  - Leak Detector lines move around the perimeter of a square IF there is flow

- **SCREEN #2**
  - Shows current flow in Gallons/Minute
  - Example shows 0.70 gpm.
  - This screen should be ZERO when water is shut off.

- **SCREEN #3**
  - Meter Reader Screen “rounds” the current reading to the nearest 10 gallons.
  - Also shows “leak detector in upper right.

- **SCREEN #4**
  - Shows the total water use. NOTE DECIMAL POINT.
  - This meter is sensitive to 1/100th of a gallon
  - Example showing 3.54 gal.
